- English

EXPERIENCE

COLLEGE PROJECT [link](#)

- Local Directory database is a specialized platform designed to manage and display detailed information about the administrative divisions within Tamil Nadu.

PROJECT

E-COMMERCE

Present (2024))

- Aspiring Front-End Developer with practical experience in designing and developing responsive, user-centric e-commerce platforms. Proficient in React.js, Bootstrap, and Tailwind CSS, with expertise in integrating third-party payment gateways such as Stripe and Razor Pay to ensure secure transactions. Skilled in implementing dynamic filtering mechanisms for products (by price, size, category) and creating personalized discount systems, including subscription-based offers and first-order promotions.
- Demonstrated ability in building cross-platform web applications, optimizing search functionality with advanced filtering for enhanced product discovery, and integrating secure online payment solutions for a seamless user experience.

E-COMMERCE PROJECT USING FAKE API STORE

Present(2024)

- Front-end developer experienced in building responsive ecommerce websites using React.js and Fake Store API. Skilled in separating products into categories like men's/women's clothing, jewelry, and electronics. Proficient in implementing sign-in/signup, filter methods for sorting data, and creating an add-to-cart feature with quantity adjustments. Strong understanding of API integration and modern web technologies like Bootstrap and Tailwind CSS.
- Building modular, scalable components in React for efficient product filtering and dynamic content loading.
- Skilled in designing functional, visually appealing e-commerce interfaces with smooth cart functionality.
- Seeking a front-end developer role where I can leverage my skills in e-commerce web development to contribute to innovative projects

IMAGE SEARCHING APP

Present(2024)

- Developed a dynamic image search application using JavaScript and the Unsplash API, enabling users to search and view high-quality images based on specific queries.
- Real-time image retrieval through asynchronous requests, enhancing user experience with instant results.
- Search functionality with optimized filtering to handle extensive image datasets effectively.
- Implemented error handling and fallback mechanisms to maintain functionality under varying network conditions.
